

Welcome to a Quick “What’s New” in using the new SPRS 4.0 Detail Positive Negative Records for Government Users.

Detail Pos/Neg Records is still in the same location on the menu as the prior SPRS application. In addition, the information needed to enter is still the same, just a little different look and feel. Enter the CAGE Code, there is an option to enter a Supply Code to narrow down the search, the FSC/PSC toggle now is preselected.

Once in the module if the search completed was incorrect a user can use the search function that is available instead of having to use the back button to restart the search. In addition, the Back button is no longer available, now there are breadcrumbs that will allow a user to move to prior screen.

Review the information in the report. At the top the user has Company information, but more detail has been included. There is an opportunity to see SAM information, along with Supplier Risk Score and Color, as well, by using the View Detail. The Color Legend is now included for easy viewing. Next is the option to select Positive or Negative records and a report of all the records used to create scoring as it has been in the past, however it is no longer a long report but now tabbed by record type.

To obtain a copy of this report, there is now an Export button in the upper right-hand corner. Prior to this release there was a print option. Exports have a row limit, if the requested cage has more rows than twenty thousand rows, the job will not complete, and a message will popup suggesting choose one or more supply codes to reduce the output rows.

Additional questions can be directed to our helpdesk, the email is listed here.

This concludes What’s New in using SPRS 4.0 Detail Positive Negative Records for Government Users.
